## Altronics Aviation Headsets

Altronics aviation headsets represent outstanding value for money and meets the exacting standards of the Australian aviation industry. Models include a traditional wire boom and flexible boom models. Even better news for today's pilot is that we bulk purchase direct from the factory saving you several \$100s compared to our competitors' price. All models require 8-16V DC to operate. This is supplied from the aircraft intercom system.

**Features** • Extra thick ventilated cushion headpad for maximum comfort • Corrosion proof chrome plated steel • Stirrup pivot assembly gives ear cups universal fit • High quality shielded lead • Soft gel filled ear seals for comfort and maximum attenuation • Lock nut construction for customised fit • Set it once it fits you right every time • Earphones (300Ω each) wired in parallel for safety and reliability • Earphones compatible with 150 - 1500Ω systems • Volume control with memory indents • Universal boom allows mic to be placed on the left or right side • Spring tension boom assembly for precise microphone placement • High performance noise cancelling electret microphone

## NATA Certification

Altronics headsets have now been certified by National Acoustic Laboratories and have been given an SLC80 rating of 29. (Many other popular makes have a much lower rating, typically in the order of 23 - 26.) This means you will hear less cockpit noise when you wear an Altronics headset!

Price Each		RRP	2+	4+
C 9063A	Black flexible boom, electret mic	299.00	270.00	240.00
C 9064A	Black flexible boom, 200Ω dynamic mic	379.00	345.00	309.00

## Aviation Headset Accessories
